PROFESSIONAL SUMMARY

Performance-driven Frontend Developer with production experience designing, building, and deploying scalable, user-centric web applications serving 10,000+ active users. Proven track record managing full product lifecycles—from initial architecture to production deployment—including a 4-stage fundraising platform, an AI-driven political tool, and a live-bidding application. Deep technical expertise in Vue.js, Nuxt.js, Next.js, React, and TypeScript with a core focus on client-side performance tuning, Server-Side Rendering (SSR), and mobile-first, responsive layouts.

TECHNICAL SKILLS

Frameworks & Libraries: Vue.js, Nuxt.js, Next.js, React.js, Node.js

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL

Styling & UI/UX: Tailwind CSS, Material UI, Responsive Design, Mobile-First Architecture, Cross-Browser Compatibility

State & Data Management: Redux Toolkit, Pinia, Context API, RESTful APIs, GraphQL, Axios, Async Data Fetching

Tools, Platforms & DevOps: Git, GitHub, Vercel, Webpack, Vite, CI/CD Pipelines, Jest, Chrome DevTools

EXPERIENCE

Frontend Developer

June 2024 – Present

Molitics ([molitics.in](#))

- Engineered a 4-stage multi-step **Fundraise Platform** using **Vue.js**, **Nuxt.js**, and **Tailwind CSS**; implemented real-time state tracking and optimized async data queries to seamlessly scale for **10,000+ active users**.
- Spearheaded the frontend development of **Yara AI**, deploying custom prompt workflows and automated content streams that decreased manual content moderation cycles by **40%**.
- Designed and launched the **M Store** application featuring live bidding architecture; integrated WebSocket-driven data synchronization to maintain sub-second latency for over **500+ concurrent bidders**.
- Refactored legacy code into reusable, modular UI components, accelerating frontend rendering performance benchmarks by **25%** and establishing team-wide coding standards.

PROJECTS

Molitics Platform Migration | *Next.js, Redux Toolkit, REST API, SSR*

Migrated a legacy codebase to a modern **Next.js** architecture utilizing Server-Side Rendering (SSR) and configured **Redux Toolkit** to optimize global data persistence.

Developed an API-driven, interactive homepage with real-time social metrics (likes, trends, follows), accelerating initial content load speeds and Largest Contentful Paint (LCP) by **30%**.

Built a dynamic AI-powered analysis module, enabling users to generate side-by-side profile comparisons with real-time analytics.

Molitics Next.js Dashboard

Next.js, Redux Toolkit, REST API, SSR

Developed a modern frontend layout using **Next.js** with **Redux Toolkit**, creating reusable Redux slices and scalable state management.

Built an API-driven Home Feed with posts, like/dislike, comments, trending feed, follow/unfollow functionality, and leader profile pages.

Developed an AI-powered Leader Comparison feature for comparing political leaders through AI-generated insights.

Created reusable, responsive components and optimized API integration for a fast, maintainable, and production-ready user experience.

IPL Stats Tracker | *HTML5, CSS3, JavaScript, Client-Side Search*

Created a high-speed sports tracking web application featuring sub-second global text indexing and custom multi-attribute filtering logic.

Designed an abstract state management layer allowing for immediate data swap transitions when switching from local mock arrays to live API streaming feeds.

EDUCATION

Master of Science (M.Sc.) in Computer Science , Chinmaya Degree College	2020 – 2022
Bachelor of Science (B.Sc.) in Computer Science , Chinmaya Degree College	2017 – 2020
Diploma in Mechanical Engineering , UBTER University	2013 – 2016
